Venus Remedies has received approval from The Medicines and Healthcare products Regulatory Agency of UK and New Zealand's Ministry of Health to market its generic injectable antibiotic

meropenem. Meropenem is a broad spectrum antibiotic and is used for the treatment of infections including meningitis and pneumonia. Venus said it will launch its generic meropenem by March, adding regulator nods for both the territories has opened doors for it to enter the lucrative market for penems of \$250 million in Europe and \$20 million in New Zealand.
